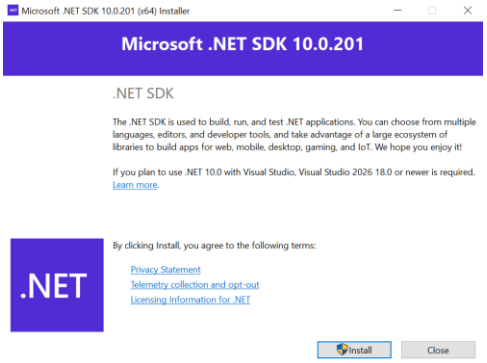
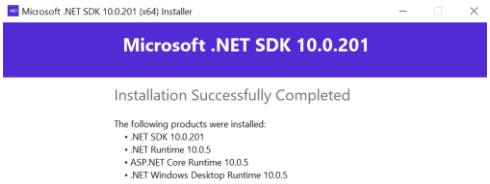
Setup guide

SDK Setup:

Go to [Download .NET (Linux, macOS, and Windows) | .NET]



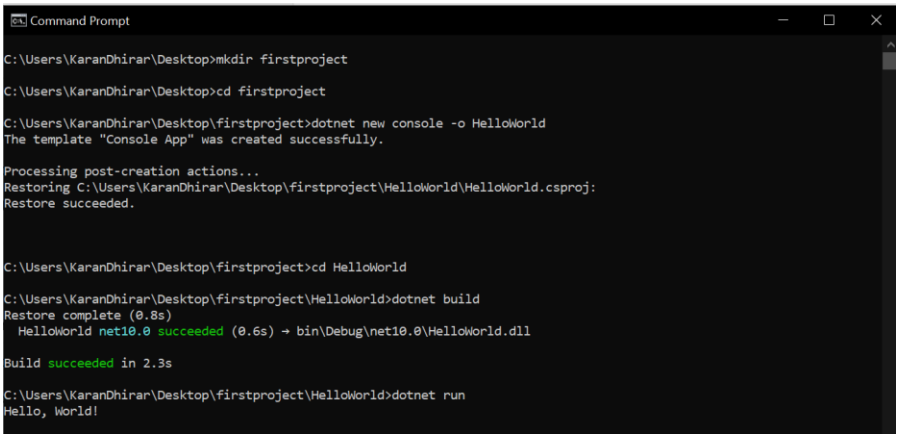
After installation:



Validate installation:

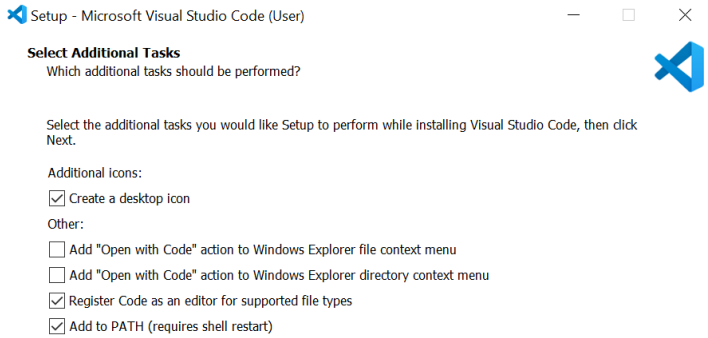
Go to the command prompt and type the command "dotnet –version"

Create your first console based app and execute it:



VSCode

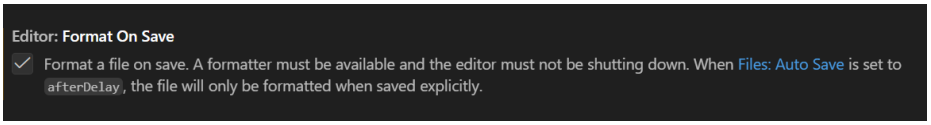
1. **Go to [Download Visual Studio Code - Mac, Linux, Windows]**



2. **Open VS Code and go to File → preferences → settings.**

   Type "place" and select the following options:

3. **Open VS code and go to File → preferences → settings.**
   Type "format" and select the following option:



4. **Go to the extensions section and install the following:**
   a. **C# Dev Kit (Microsoft)**
5. **Use the ctrl + ` keys to open the integrated terminal and validate installation with dotnet - -version command.**

***You can also open an existing c# project on vs code. Go to cmd and then the project folder and then type 'code .' It will open the project in vs code.**

Git Install:

- Go to https://git-scm.com/downloads
- Click Download for Windows
- Run the installer

Verify installation with this command- **git –version**

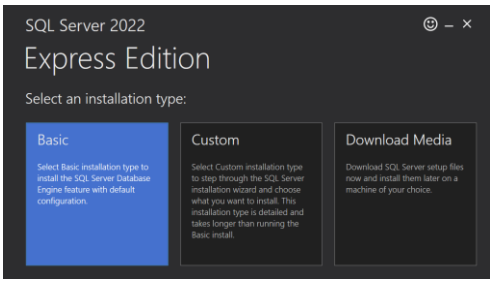
Now lets create a developer fingerprint for git (your ID)

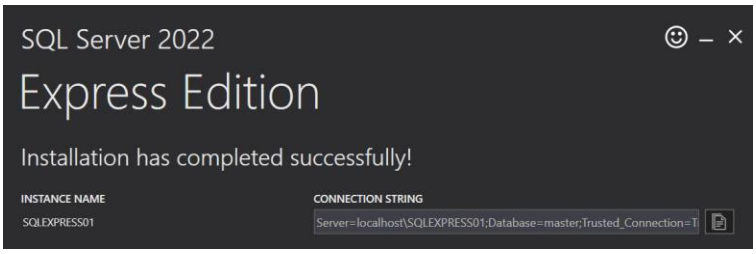
git config - -global user.name "<your name>"
git config - - global user.email "<your email>"

verify with **git config –list**

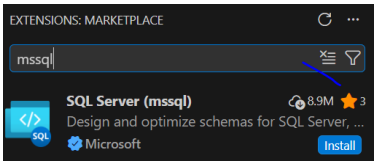
Database:

Install SQL Server express: go to this link- Download Microsoft® SQL Server® 2022 Express from Official Microsoft Download Center



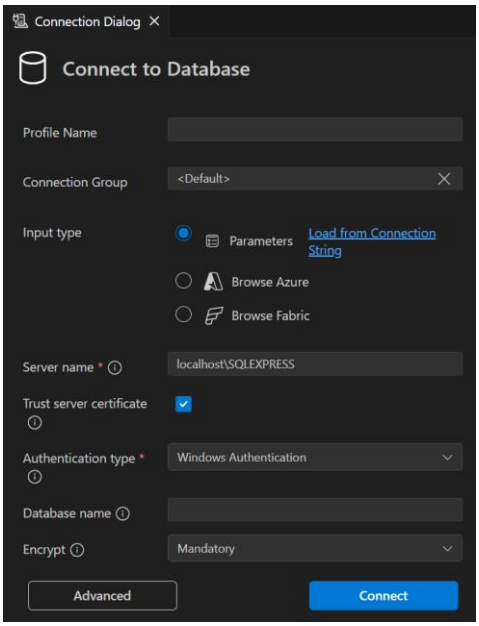


Now go to vs Code and then extensions. Type "mssql" and install the extension from Microsoft for SQL Server.



You should see a new icon on the left on VS Code for "SQL Server"

Now click on "Add connection" and enter the following details:



Connection Dialog
